

BETTER BEEF

Kallion Farms Brahman cattle are bred to be one step ahead of the market. The common cattle in today's beef industry are bought and sold based mainly off of their physical appearance or conformation. But, beauty is only skin deep. Kallion Farms Brahman cattle are not common, they are exceptional. We test our cattle for genetic superiority in Marbling, Tenderness and Feed Efficiency. We also test our cattle for live carcass quality through ultrasound technology and actual carcass quality through extensive product analysis. What it comes down to is, our cattle are bred for BEEF. This combination of traits is passed from generation to generation, improving the consistency of our product.

Being a BEEF producer means much more than having pretty cattle. You have to be able to know they will produce for both your program, as well as meet the expectations of the end consumer. Brahman cattle are BEEF animals and at Kallion Farms we are proving it.
